**How acidic is the soil and the water?**

You'll be investigating the acidity (pH) of the soil or the water in your area. Lemons and soft drinks are acidic. You can tell because they taste sour on your tongue. But how acidic is the soil? Or the water in that ditch?! Fortunately, you don't need to test it with your tongue — you can use RED CABBAGE! First, a few facts: ACID is bad for your teeth. It softens your tooth enamel and hard enamel protects your teeth from cavities. Acidic soil is vulnerable soil because harmful substances sink into the groundwater faster. However, acidic soil can also be very GOOD for certain plants. The more acidic the soil, the bluer the hydrangea's flowers will be. A BASE is the opposite of an acid. A liquid that is basic often feels slippery and if you were to put it on your tongue (don't do it!), it would taste bitter. Most cleaning products, like soap, are basic.

**How does it work?**

It all begins with the QUESTION: What do you want to measure? Do you already know? GREAT! Now you can GET GOING.

**STEP 1.**
You start by making the MEASURING INSTRUMENT. *What you'll need: Smart Kids Lab / making meters. There you'll find all the information you need to get started.*

**STEP 2.**
Now it's time to go do RESEARCH and experiment. Before you start, think about what you want to investigate in your area and how to go about doing it.

For example, do you want to investigate the soil's acidity and what it means? Or do you want to find out which drink is best for your teeth?

You'll find more facts on the compare-o-meter.

*What you'll need: the Smart Kids Lab / experiments worksheet. This explains how to use your homemade meter to collect data.*

**STEP 3.**
Collect the measurement DATA on the Smart Kids Lab worksheet. *What you'll need: the Smart Kids Lab / experiments worksheet. You can record your measurements here.*

**STEP 4.**
Go grab the COMPARE-O-METER so you can compare your measurement data to that of others. You'll also find a lot of interesting information here. *For this you'll need: Smart Kids Lab / compare-o-meter worksheet.*

**STEP 5.**
Take a picture of your measurement data and put it on the GREAT DATA MAP. You can find it at smartkidslab.nl.

*What you'll need: You can take a photo with a phone or digital camera. THE GREAT DATA MAP can be found at smartkidslab.nl (in the menu bar).*
Acid is bad for your teeth. It makes your tooth enamel soft and enamel protects against cavities. Yikes!

A BASE is the opposite of an acid. Basic liquids often feel slippery to the touch and taste bitter (but DON'T TASTE THEM!). Most cleaning products are basic.

Acidic soil is vulnerable soil. Harmful substances can sink faster into the GROUNDWATER and our drinking water!

Over-fertilizing farmland makes the soil acidic!

Hydrangea Loves acid soil

Trees and flowers besides soil with a pH value between 5.5 and 6.5

Blue flowers? The more acidic the soil, the bluer the Hydrangeas will be. Lime makes soil less acidic and the flowers turn a lighter blue... sometimes even purple or pink!

Leak your RED CABBAGE from your dinner will turn BLUE when soaked in soapy (basic!) dishwater. BAH!

A BASE is the opposite of an acid. Basic liquids often feel slippery to the touch and taste bitter (but DON'T TASTE THEM!). Most cleaning products are basic.

For testing WATER and other liquids: follow steps 1, 2, 3 and 4.

For testing SOIL: follow steps 1, 2, 5 and 6.

You measure ACIDITY LEVELS with pH values. 

pH 1 is SUPER ACIDIC, pH 7 is NEUTRAL (tap water) 

pH 14 is VERY BASIC (the opposite of acidic).

What do you need? 

Fresh red cabbage  
Blender  
Funnel  
Coffee filter  
Ruler  
Waterproof marker  
Transparent plastic cups  
Kitchen scale

Pour 2 glasses of water into the blender and add 4 leaves of red cabbage. Blend it as smoothly as possible. Make sure there aren’t any big pieces left.

Put a coffee filter in the funnel and pour the cabbage mixture from the blender into it. Catch the cabbage juice in a bottle.

Draw two lines on the plastic cups. One at a height of 3 cm and the other at 6 cm. Also remember to write which fluid you’re testing on the cup.

Pour red cabbage juice to the first line. Now pour the liquid you want to test to the second line.

THE RED CABBAGE JUICE CHANGES COLOR DEPENDING ON THE ACIDITY LEVEL

Does your red cabbage juice turn...

RED or PINK? Then it’s acidic.

PURPLE or BLUE? Not very acidic / neutral.

GREEN or YELLOW? It’s pretty basic.

The red cabbage juice is the ≈ ∼ the ≈ ∼ How acidic is the ≈ ∼ and the ≈ ∼ SMART KIDS LAB making Meters

DISCOVER HOW HEALTHY YOUR NEIGHBORHOOD IS AND WHAT YOU CAN DO TO IMPROVE IT!

Lemons are acidic. You can tell because they taste sour on your tongue. But how acidic is the soil or water? Fortunately, you don’t need to test it with your tongue ... you can use RED CABBAGE!

Make your ACIDITY (pH) METER quickly and easily with RED CABBAGE... just waiting for you at the nearest supermarket!

Pour the red cabbage juice to the line and stir with a plastic spoon. Wait until the soil settles to the bottom to see the color.

Draw a line on the plastic cup at a height of 6 cm. Now weigh 5 grams of soil and place it in the cup.

Draw a line on the plastic cup at a height of 6 cm. Now weigh 5 grams of soil and place it in the cup.

What do you need?
Take a picture of this worksheet & put it on the BIG data map at SMARTKIDSLAB.NL

Step 1

Step 2

Step 3

Step 4

Step 5

Test your soil or water with your ACIDITY measuring solution. What colour is it? Take a photo of it, print it out and stick it here!

Paste a picture of your results here too!

PLACE A

PLACE B

PLACE C

And here...

Below, draw 3 places where you want to measure how acidic the soil or water is. Next, go to these measurement spots and fill some cups with soil or water.

TIP: Take some soil from your garden or potted plants and compare it with soil from a forest or the park. Or compare ditch water with your own spit or water from a fish bowl!

Compare your results with the color solutions from Step 1 and with the acidity measuring solution. Are there differences? Why is that? Is the soil or water acidic or alkaline? Is the water still very acidic?

TIP: With different experiments, you can measure how many MINERALS are in the water and how many MICROBES are in the ground. Download these experiments at smartkidslab.nl

Make the ACIDITY METER! First, test different liquids you have at home like lemon juice, cola, coffee, milk, tap water and soapy dish water. You can create a beautiful range of different colours this way. Write down which liquid is in each container. Do your results match the ACIDITY compare-o-meter?

MY RESEARCH CONCLUSION:

! How acidic is the soil and the water?
